

Connecting Modules

Product Images

Short Description

Connection modules are custom-made to interconnect tents to other tents, containers or vehicles.

Description

We design and manufacture shelters that provide great flexibility for interconnecting among other shelters, containers and vehicles.

We have developed extensive capabilities in connecting modules / booting solutions to create sealed passageways between our soft shelters or shelter - container, shelter - vehicle connectors. Containers can also be connected one to another, in a simple but effective way, requiring minimum overwork added to the containers outside surface.

Such products are developed on a project basis, by our in-house design and engineering department who can create any new configuration that may be required. All our connection modules are weather-tight.

LANCO Group supplies fully-integrated mobile shelter systems destined for military, government, industrial, humanitarian and commercial customers who need proven solutions for any environment. These systems can be outfitted with showers/sinks, potable/wastewater systems, hospital cots, storage systems and work stations. Accessories are optimally configured, organized and packaged in transit cases to facilitate rapid and easy deployment.

Additional Information

Application area	Triage, Field Hospitals, Military, Decontamination and Hazardous Goods Operations, Accommodation and Catering, Weatherproof Shelter for Sensitive Equipment and Workshops, United Nations, NGOs/Humanitarian organizations
